### DETAILED ACTION

The present application has been transferred from former Examiner Khanna to the present Examiner.

#### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 14, 16, and 18-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ahmad et al. (US 2005/0085497 A1) in view of Wong et al. (US 2004/0067995 A1).

Ahmad et al. teach the use of compounds of formula I to treat cholesterol disorders, including the use of melagatran therein (from a list of only 4 agents):

“Anti-thrombotic agents which may be employed in combination with compounds of formula I of the invention include melagatran and ximelagatran (Exanta.TM. Astra Zeneca), warfarin and Factor Xa inhibitors such as razaxaban. “

(see abstract, para 315) [It is noted that Applicant has retained the open “comprising” language, allowing for anything else to be administered therein, along with melagatran].

Wong et al. teach that melagatran prodrugs were well known in the art at the time of the invention, and known to be administered in combination with other agents for antithromboembolic agents (wherein the other agents that may also be used in combination included cholesterol lowering drugs) (para 75, claim 6).

It would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to use melagatran or prodrugs thereof in a method for lowering cholesterol, in Ahmad et al., because Ahmad et al. teach that compounds of Formula I may be used to treat cholesterol disorders, and the selection of melagatran from a list of 4 antithrombotic agents, would have been merely a matter of routine optimization, depending on the desired effect. Furthermore, the selection of any prodrugs thereof also would have been obvious based on the teachings of Wong et al., as such prodrugs were well known in the art.

From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.
